Abstract: *Efficient classroom management is crucial for fostering an environment conducive to learning and student development. This paper introduces a novel approach to classroom management through the integration of a user-friendly web application. The system aims to streamline various administrative tasks, enhance communication between educators, students, and parents, and promote student engagement. The web application offers a centralized platform for educators to manage attendance records, assignments, and grades digitally, reducing the time spent on administrative tasks. Additionally, it facilitates real-time communication through messaging features, enabling quick updates on class schedules, assignments, and announcements.*
