Abstract: *In today's world it is not safe for a person to travel alone because there will be high chances of becoming a victim of violent crimes such as robbery, domestic violence, assaults and harassments. The good way to reduce chances of these attacks is to identify and call on resources to help you out of unsafe situations. This application can be accessed by single click, when the user is under assault or any attack then they would press a button on their phone and it will gather their current location and start recording a 5 second video with sound. This will then automatically send the location and video straight to the police or friends and family in the mentioned contact details. When you want to activate the attack application, press the panic button. When it is in active state you can deactivate the application by pressing the deactivate button. You then enter your 4 pin code and press ok to deactivate it. You only have 10 seconds to do.*

Keywords: Intelligent System.
