***Abstract:** In this project we are attempting to study about the Sheet molding compound [SMC] panel tank benefits objectives necessities advantage and disadvantage and there uses the capacity of this is 25000 liters and compression is made with other tanks. By using the different types of software, we can make the models by using AutoCAD, Staadpro and RIVET, various types of loads also can be resisting This type of tank can be calculated by taking references of an IS code 875 Part 3. Where test is can be done that which are not done on it.*
