

# Online Voting System

Saurabh, Pawan Pal, Shubham Chaudhary, Satyam Singh

Dronacharya Group of Institutions, Greater Noida, India

***Abstract:** Online voting (e-voting) would be more convenient, relatively secure and utilize fewer resources. To be able to access e-voting system from a personal, business or even a public library computer may be more convenient for many people needing to vote. This could potentially be a solution for the low voter turnout at the polls. However, it is still questionable whether elections can be conducted online or over the internet due to the high level of concern over security. conducted online or over the internet due to the high level of concern over security. A pre-computation process is applied due to efficiency improvements. The details of this optimization and improvement in the web services process will be explained in subsequent sections. In This system whole system is managed by the administrator. He can update the database of candidate, voting schedule, citizen. And declare the result.*

**Keywords:** Online voting
