**Abstract:** Education has changed significantly over time with the advent of e-learning, when instruction is delivered remotely and on digital platforms. Digital learning is the term used to describe web-based education that effectively imparts knowledge to students via the use of information technology. In actuality, this was only recently revealed, and people from all over the world have responded to it amazingly. A different name for it is the Smart Teaching Technique. No one in this era of technological advancement can tackle the upcoming challenges without the use of digital platforms.

The major goal of this study is to look at how dependent students are on technology for their education and learning as well as to comprehend the significance and necessity of new teaching methods in order to help students overcome their challenges.

On the basis of primary data on 300 respondents, Factor analysis Secondary information has been collected for the study has been applied and percentage analysis has been done on demographic variables. Total 6 factor has been identified.

**Keywords:** Digital Learning, Digitalization, Education, E-Learning, Dependency, Students.
