Abstract: *It is becoming challenging for the poor or low-income people to pay for their health. Thus, they are suffering from various diseases and as a result the death rate is increasing nowadays. On the other side, there are many people who have plenty of leftover medicines even after finishing those medicines consumption. In this paper, we have proposed a medicine distribution web portal. It is a platform for the donors who want to donate their unused medicines to the poor or low-income people who need those medicines. This system will contribute to reduce the cost for national health services by making the proper use of unused medicines; and to help the poor or low-income people to get better health services. The aim and object of this project is to prepare an online portal for the collection of unused medicines so that they can be given to the people who are in need. What this project will do is, collect the unused medicines from the people who have completely recovered from the illness and do not require the medicines anymore. After the collection of these medicines, they would be handed over to the NGOs which would check the medicines and then if approved will be given to the people directly or to the hospitals who will be giving out these medicines for free. The portal is highly effective, efficient, satisfiable and useful system.*

Keywords: Online Portal, Unused Medicine, NGOs, Donation, Collection, Internet.
