Abstract: *This study examines the value of new media in education and how it affects the processes of teaching and learning. It looks at how media and technology are developing and highlights the advantages and difficulties of incorporating them into educational settings. To discuss how new media can improve student engagement, enable personalized learning, foster critical thinking skills, and promote digital literacy, the study reviews the body of existing research literature. The article also discusses the implications for educators and decision-makers and offers suggestions for successfully integrating new media into instructional strategies.*

Keywords: New technologies and media are being used in education. Learning through new media
