Abstract: *In many important ways, the Indian school system has changed. Other countries still use online education methods, but in the past, India only used them for professional studies. Things have changed. Online education is used in India's high schools, colleges, and universities right now, and not just for professional studies. In the last few years, trade has made it much easier to teach than it used to be. The most popular trend in schooling right now is e-learning. Distance learning lets students choose from a wide range of lessons, knowledge, and classes that they can finish at their own pace. The main goals of this study are to find out how Indian education has changed over time and how government programmes have affected the growth of Indian education.*
