Abstract: *Entrepreneurs in India contribute significantly to economic growth by creating wealth, employment, new goods and services, and a better standard of living. The Entrepreneurship Development Program (EDP) is an effective strategy for encouraging entrepreneurship in order to speed up socioeconomic development, promote balanced regional growth, and encourage the use of resources that are readily available locally. This article examines self-employment broadly and aims to discover how EDP may promote economic growth and assist the subsequent generation of business owners. Many government agencies increase the potential of businesses by using EDP. This article also looks at the emergence of businesspeople in the eight states with the most population in India, as well as their present struggles and sources of motivation.*

Keywords: Entrepreneurship, Development, Programmes
