

# Ethical Issues of using Technology in Education

**Dr. Jyoti Ahuja**

Associate Professor, Vaish College of Education, Rohtak

**Abstract:** The educational system has undergone significant alteration in the 21st century. The preparation of students and teachers for our future knowledge-based society is a fundamental problem that the global education system is currently experiencing. Today, learning and teaching take place outside of the traditional classroom. The old methods of teaching and learning have undergone a digital paradigm change as a result of the internet. We must be aware of the ethical concerns that arise from the usage of technology in the classroom as well. We will be better able to solve the greatest ethical problems that are hurting our teaching and learning process if we are aware of them.

**Keywords:** ICT in Education, Ethical Issues in Education
