Surigao Del Norte State University, Surigao City, Philippines

Abstract: *An innovative QR code-based attendance management system for student council events, aimed at improving student engagement and streamlining the attendance process. By generating a unique QR code linked to the student ID, the system allows students to register easily by scanning their code with a mobile device. Data is instantly recorded in a centralized database, providing real-time attendance tracking and valuable information for event planning and analysis. Implementing this technology-based solution provides an efficient and convenient way to manage attendance and encourages students to participate more in school events organized by the Student Council.*

Keywords: QR Code, Attendance Management, Student Engagement, Mobile Devices, Technology-driven Solution
