

A Study of Supply Chain Management Techniques Adopted by TVS Supply Chain Solutions

Narendra B Bohare and Prof. Rajesh Shende
Jhulelal Institute of Technology, Nagpur, India

Abstract: *This research paper aims to explore the factors that contribute to customer satisfaction in the life insurance industry. The study uses a mixed-methods approach, combining a survey questionnaire with interviews, to gather data from customers of a major life insurance company in the United States. The findings of the study suggest that customer satisfaction is influenced by a range of factors, including the quality of customer service, the level of transparency and trustworthiness of the company, the variety and suitability of insurance products offered, and the efficiency and ease of the claims process. The paper concludes with recommendations for life insurance companies seeking to improve their customer satisfaction levels.*

Keywords: Supply Chain Solutions.
