**Abstract:** *This paper investigates the impact of school feeding programs on the nutritional status of primary school children in rural India. Nutrition plays a crucial role in the overall development of children, and school feeding programs have been implemented as a potential solution to address malnutrition and its associated consequences. This study employs a comprehensive review of existing literature, including various studies and reports, to assess the effectiveness of school feeding programs in improving the nutritional status of rural primary school children in India. The findings of this research suggest that school feeding programs have a significant positive impact on the nutritional status of children in rural areas, emphasizing the importance of continued support and investment in such initiatives*

**Keywords:** Nutritional Status, Primary School Children
