Abstract: *Health is an essential part of our lives. It influences our lives to the highest degree. Being healthy and active is always an advantage for us. But in today's fast-moving world, we often forget to take the prescribed medicine to us on time due to which we have to face a lot of issues in the future if not soon. A report suggests that over 75 percent of people do not take their medicines at proper time. This simple mistake can sometimes be fatal and can cost their lives. We aim to build an application that reminds people to take the medication according to their prescription. In this, the user has to enter the medication and the time at which it has to be taken. Based on the given input the application analyzes and gives timely reminders to the user*

Keywords: Health
