Abstract: 90% growth of technology and infrastructure has made our lives easier. The advent of technology increased the traffic hazards and the road accidents take place frequently which cause huge loss and property because of poor emergency facilities. We all have heard about the refusal on the part of private hospitals in Kollam and Trivandrum to admit an accident victim resulted in his tragic death, almost 7 hours after the accident. This project will provide an optimum solution to this drawback. This system will link all the hospitals in a locality. It will provide the current status about the blood banks, ICU, ventilator and casualty services of all hospitals, We can know whether a bed is available in an ICU or not. If an accident occurs in a particular area one can take a photograph and can inform the hospitals about the condition of the patient such that the hospitals can take immediate actions. Through the emergency button available in the system, the users can inform authorities on accidents occurred.
