**Abstract:** *Transportation and logistics form the backbone of global trade and economic stability. However, persistent disruptions in these sectors have emerged as significant contributors to inflationary pressures worldwide. This review paper examines the mechanisms through which transportation constraints and logistics inefficiencies influence inflation across economies. It highlights empirical studies and recent events, including the COVID-19 pandemic, geopolitical tensions, and rising fuel prices, that have exacerbated global price volatility.*

**Keywords:** Transportation Bottlenecks, Global Trade, Production Delays
