A Study on the Development on Women Organised Mini Businesses and Limited Scope

Dr. Neha Goel
Assistant Professor, Department of Economics
Nirmala Memorial Foundation College of Commerce and Science

Abstract: *This is introduced as the need might arise for thorough effect appraisal in ICT4D. We created two hypothetical models that anticipate connections between business development, ICT use, and chose precursors. We utilized underlying condition displaying (SEM) to test the models with information from a multistage likelihood overview of ladies miniature business people in Mumbai, India. The two models expected a quantifiably significant, but limited causal association between induction to ICTs (as the free component) and business improvement (as the dependent variable). The hypothetical model and insightful techniques recommend that future investigations ought to zero in favoring the particular factors that intercede the effect of ICTs on the development of tiny organizations.*

Keywords: Microenterprises, urban women , development, limited growth
