Abstract: *A comprehensive study of digital media's influence on literacy delves into the multifaceted impact of digital technologies on reading and writing skills. This research explores how the digital landscape, including social media, e-books, and online news, shapes language proficiency, critical thinking, and information consumption. It examines both the advantages, such as improved access to information, and the challenges, like the potential for distractions and misinformation. The study aims to provide insights into how educators, policymakers, and society can harness the potential benefits while mitigating the risks associated with digital media in the context of literacy.*
