Abstract: *Over the last several decades, women's roles in the public sphere and in society at large have evolved. In many instances, the position of bread winner has replaced that of bread maker. These responsibilities are greatly influenced by the business and cultural settings. The position has changed due to social developments. They have a variety of responsibilities in the modern workplace, including corporate executives, policymakers, and company owners. However, there are still societal constraints on the ideal part that they should perform in society. There are still societies that believe women should only be at home taking care of their families and are not fit for work. This assumption is making it harder for students to pick their school and professional path in the present global world. In order to help women play a bigger role in society, this article will attempt to chronicle the roles that women have performed as social emancipators and entrepreneurs. Despite the globalization of business, local cultures and values still have a significant effect on this. Along with these winds of change come duties and expectations*

Keywords: Changing role and social expectations, Progress from home maker to rule maker, entrepreneurship and globalization of business
