Abstract: *Practical Geography is the part of information that concentrates on the grounds, the highlights, the occupants and the peculiarities of the Earth. The main individual to utilize the word geology was Eratosthenes and in a real sense signifies "expounding on the Earth". The word can be partitioned into two sections geo and graphy. Geo implies the earth and graphy alludes to composing. Today useful Geology amounts to a whole lot more than expounding on the earth yet its troublesome discipline to characterize topography is an interesting subject. It uncovers every one of the magnificent changes and exercises that have been happening on the planet starting from the dawn of history. Geology draws from across the physical, social, financial and political circles to the neighborhood and the worldwide by commonsense way . Through applied Geology , we figure out how to see the value in the variety of scenes, people groups and societies, Topography is hence a crucial subject asset for 21st century worldwide residents, empowering us to confront inquiries of liking economically in a related world.*

Keywords: Geography Laboratory, Cartographical Studies, Instrument survey
