**Abstract:** *This paper explores the intricate interplay between "woke culture" and the traditional concept of chivalry in contemporary society. "Woke culture" advocates for social justice, challenging deeply ingrained inequalities, and striving for greater inclusivity, particularly in matters of gender. Chivalry, originating from medieval Europe, has long been associated with values such as honour, courtesy, and gallantry, often framed within a framework of male protection of women. While chivalry is a way of showing respect and protecting the weak, in modern times, it can be condescending and patriarchal. So, it is important for men to consider alternative ways of expressing kindness and respect towards women. The traditional concept of chivalry, which values women as passive and in need of protection, is old and harmful. Instead, men should strive to be allies and advocates for women's rights and equality. In a world that often devalues kindness and compassion, chivalry can be a valuable and important virtue. Yet, it is important for men to understand the importance of consent. Men need to be mindful of the power dynamics at play when expressing chivalry towards women. This research paper is focused on the interplay of both terms and effects they have on each other.*
