Study on Process of Waste Management

Mandeep Singh Ahuja and Aniketkumar Chaurasia

The Byramjee Jeejeebhoy College of Commerce, Mumbai, Maharashtra

Abstract: Waste management is an important part of the urban infrastructure as it ensures the protection of the environment and of human health. It is not only a technical environmental issue but also a highly political one. Waste management is closely related to a number of issues such as urban lifestyles, resource consumption patterns, jobs and income levels, and other socio-economic and cultural factors. Waste prevention and minimization has positive environmental, human healthand safety, and economic impacts. Implementing a "less is better" concept provides better protection of human health and safety by reducing exposures, generating less demand for disposal on the environment. Less Waste also lowers disposal cost

Keywords: Waste management
