Abstract: *A overview of the noteworthy e-resources offered by different publishers, aggregators, or third-party suppliers within the management sciences area can be found in this document, which is notably helpful for library professionals working with the Management Science Institute Libraries. It will undoubtedly assist library professionals in selecting the finest e-resource or resources from the 59 mentioned e-resources based on their needs and the library's budget. In order to address this issue, which has been a worry for all libraries and library professionals working to consider the future of librarianship, the paper also outlines strategies for acquiring e-resources and offers guidance for their appropriate administration. In order to meet the ever-increasing demand for e-information from their clientele, the AICTE has already been urged to reconsider listing only a select few reputable e-resources in the process handbook for its subscription by the authorized management institutes. Instead, they could include all of the e-resources listed here and recommend management science institutes to choose from and subscribe for their libraries..*
