Abstract: *Digitalization in libraries represents a fundamental shift in the way information is stored, accessed, and managed. Libraries, traditionally associated with physical books and materials, are transforming into digital repositories, driven by advancements in information technology, the internet, and user demands for faster, more accessible information. This paper explores the recent trends in library digitalization, the challenges involved in this transformation, and the potential future directions for digital libraries. Emphasis is placed on how digital libraries contribute to research, education, and information dissemination while ensuring inclusivity, accessibility, and preservation of cultural heritage.*

Keywords: Digitalization, books, material, technologu, research, dissemination
