**Abstract:** *Leadership styles significantly influence employee productivity, impacting overall organizational performance. This research paper explores various leadership styles, such as transformational, transactional, and laissez-faire, and their effects on employee productivity. By examining these relationships, the study aims to provide insights into how different leadership approaches can enhance or hinder productivity within a workplace. The paper also seeks to identify the most effective leadership styles for fostering a productive and motivated workforce. Through a comprehensive review of existing literature and empirical analysis, this study highlights the critical role of leadership in shaping employee behaviors and attitudes. It underscores the importance of adopting the right leadership style to maximize employee performance and achieve organizational goals. The findings are intended to offer practical recommendations for leaders and managers striving to boost productivity through effective leadership.*
