Abstract: *In modern society, a girl's primary concern is for her protection and safety. A few years ago, a lady had to use the social media system to express her outrage and serve as a warning to others about sexual harassment that she had experienced. According to a report, of people must endure sexual harassment against their will. In public spaces, at work, and at home, the percentages, and respectively Police caseloads are initially a big problem, but there are other issues as well, such as not knowing the victim's precise location or whether the crime was committed at all, and when there is in-sufficient proof, the police cease their investigation. This study focuses on a novel Internet of Things-based evidence-gathering tool to guarantee women's safety and it gives us great pleasure in presenting the preliminary project report on Women Safety android app.*

Keywords: Women safety, Precise location
