Abstract: *Pharmacovigilance (PV) is an important area for the safety and ensuring that the patients are safe in every aspect of the drugs being taken or injected. India is still in its nascent stage; there is a lot to be done and to learn, in the field of PV, in ensuring that the safe implementation of the activities and work done is achieved. The major problem in India is the under-reporting of adverse drug reaction (ADR). There is an increasing number of hospitalization of patients owing to adverse effects of drugs and it becomes a challenge to find out the exact cause the ADRs when a patient is treated with multiple drugs simultaneously. In the review, we will explore the different types of assessment scale to do the ADR assessment and to find its causative agents.*
