Abstract: *Communication is a vital tool and most important asset for connecting with people and solving problems in each and every sector today. However, it can be between people living next to each other to people living in two or more different countries too. Since it is not possible to connect such huge amount of wires globally, Wireless Communication plays a beneficial role. It has emerged as one of the largest sectors of Telecommunications in the 21st century. This paper focuses on what exactly Wireless Telecommunication is, The evolution of wireless communication, It's advantages and disadvantages, its elements, its types, Security analysis and its future challenges.*
