Abstract*: The traditional teaching methods have been criticized for being ineffective in engaging students and promoting deep learning. In response, modern teaching-learning methods have emerged, focusing on student-centered, technology-enhanced, and collaborative approaches. This paper explores the effectiveness of modern teaching-learning methods in enhancing student engagement and outcomes. A review of literature reveals that methods such as flipped classrooms, gamification, and project-based learning can improve student motivation, participation, and academic achievement. The paper also discusses the challenges and limitations of implementing modern teaching-learning methods and provides recommendations for educators and policymakers.*

Keywords: traditional teaching methods
