Abstract: Speed is one of the basic reasons for vehicle accident. Many lives could have been saved if Emergency services could get accident information and reach in time. This project deals with Accident detection system when the accident occurs it uses various components and alerts the Rescue team for help. An efficient automatic accident detection with an automatic notification To the emergency service with the accident location is a prime need to save the precious human Life. The proposed system deals with accident alerting and detection. It reads the exact latitude And longitude of the vehicle involved in the accident and sends this information to nearest Emergency service provider. The goal of the project is to detect accidents and alert the rescue Team in time.

The project aims to design and implement a real-time system to detect vehicle crashes and promptly alert emergency services to reduce response times and improve post-crash outcomes.
