Abstract: *Internet of things (IOT) is a connecting a physical smart device and providing an information and also connecting a human-to-human relationships. In today's world of connectedness, people are becoming accustomed to easy access to information. Whether it's through the internet or television, people want to be updated information with the latest events happening around the world. Now a day's people prefer Internet of Things because they can interact with people easily and it requires less time. Notice Board plays a vital role in today's world. It is commonly used in place like schools, colleges, railway stations and other variety of institutions. In past years, Papers, ledgers, and documents are used to share information and latest news. Existing notice boards takes more time and it is a difficult process when a number of users or customers is high. It also costs more and the information is not received by the end users at the right time. It is emergency when it is in the need of information*
