AISSMS Institute of Information Technology, Pune, India

Abstract: *For the students, placements mean fresh opportunities and professional development. However, it will be a clumsy and bureaucratic activity for schools to manage the placement process because a lot of the work will be done manually. It is time-consuming with great effort from the staff because it will hamper the speed.*

For this to be an easy and systematic procedure, we are currently establishing a web portal for the placement department of the college alone. The system will provide a secure and systematic platform through which placement details can be managed with ease. The system is accessed by students and placement officers using login-based access.

For Placement Officers, this site will be a revolution. It will enable them to monitor student files, coordinate recruitment activity, and reduce paperwork by a phenomenal percentage, making their work much simpler. Students themselves will simply view their academic and personal details. The system will even shortlist suitable candidates according to company requirements, easy to hire for the recruiter and providing students with the most convenient opportunity
