Abstract: *In this digital age, everything is becoming online and accessible anywhere. From ordering foods, groceries, clothes, shoes, to fast-moving consumer good people use internet for this. The car buyers also make the use of internet in their car purchasing journey. The Car dealer portal helps the user in this process. It allows them to view cars, specifications, images. And many more. They can also get in touch with the dealer through this portal. The customers can book test drive of the car from their home and also, the user can register their interest in a car by giving their contact number. It saves the customer's time. The car dealership also gets more customers due to online presence.*

This is a current project for a classic Car buys/sell a business on online platforms. A web interface is provided for the system. It is useful to keep a record of the user information as well as the CAR details. If a customer wants to obtain a car, he or she can do that by finding specific price ranges from high to low or low to high. This vision is to create a marketplace for car buying and selling that will allow taking interest car buyers or sellers to replace the manual processes of car buying now use in the country, with the use of the internet. It also gives information about every single item for sale in terms of suitable or appropriate quality and variety and cheap pricing. The web application makes it simple for consumers to buy or sell car..
