Abstract: *The Quote Inspirer Bot is a Discord application designed to deliver motivational, anime, and Japanese quotes to foster positivity in student and cultural communities. Built using Python and the discord.py library, the bot uses a JSON database to provide random quotes via a !quote command. This project demonstrates Discord API integration, JSON parsing, and command handling. Testing in a student server showed strong engagement, especially with anime quotes. Despite a short timeline, the bot achieves its goal of enhancing online interactions. This paper details the bot's design, implementation, testing, and potential enhancements, contributing to the role of bots in educational and cultural contexts.*
