**Abstract:** *It has been noticed that soft skills play a vital role in the overall development of engineering students by enhancing their knowledge in diverse fields. Under this paper, the author has focused on the various factors responsible for soft skill development across multiple engineering students across India. The study was conducted by taking the responses from the graduate students of engineering and research-based students, and the total responses collected are 110. The frequency analysis has completed the research to see the demographic profile of the engineering student's answers and the association between the engineering students' demographic profile and the factors responsible for the overall development through soft skill development. The societal importance of this study is that the parents will understand the importance of the soft skill and its contribution towards the overall development of the students. It has been found that there is a significant impact on the Demographic profile of the engineering students and the factor responsible for the overall development of the engineering students in India. Engineering students in various areas, such as information technology, electrical engineering, mechanical engineering etc., must widen their hard skills to gain soft skills.*

**Keywords:** Soft Skill, Overall development, Higher Education, Engineering Students
