Abstract: *The system's operation also simplifies and reduces the cost of crime documentation by utilizing decentralized storage methods. This not only enhances information security but also minimizes server costs. The platform is particularly valuable to crime investigators, especially undercover agents relying on insider information Once the software is ready, it will undergo deployment in a test environment, where the testing team will begin comprehensive testing of the entire system. This is a critical phase aimed at ensuring that the application functions precisely according to the customer's specified requirements. Testing plays a pivotal role in the software development process, serving to validate both the functional and non-functional aspects and requirements of the project*

Keywords: crime documentation
