Abstract: *Combining library science with computer science, the application of computer technology in library resources management requires managers to actively summarize and study from the former experiences and scientific practices. Moreover, scholars are also supposed to think over the use of computer technology so as to bring out the best state and development in library resources regulation. On the basis of computer development and application, the work probed into library resources management and the utilization of computer technology, as well as analyzed the advantages and disadvantages from different perspectives.*
