

# Formulation and Evaluation of Herbal Beard Balm

Sharma Ankush and Kumari Preeti

**Abstract:** *In recent years, beards have gained popularity as a fashion trend, and many men are looking for ways to preserve and enhance the appearance and health of their facial hair. But keeping a beard healthy may be difficult since it has to be properly nourished and hydrated to avoid dryness, irritation, and itching. The personal care business has made the creation of natural and efficient beard care products a top goal in response to this increasing demand. The creation of a herbal beard balm using a variety of natural ingredients, such as coconut oil, almond oil, rosemary oil, kalonji oil, hard paraffin, yellow soft paraffin, extra pure paraffin, beeswax, emulsifying wax, aloe vera gel, glycerin, and vitamin E capsules, is described in this report [1]. The balm was designed to hydrate and feed the beard, encourage healthy growth, and reduce irritation. To guarantee stability, effectiveness, and customer acceptance, a number of trials were conducted to perfect the formulation. For men wishing to enhance the beauty and health of their beards, the resultant herbal beard balm provides a natural, efficient solution [2].*
