Abstract: *The role of digital learning, in alignment with NEP 2020, is integral to transforming the education landscape in India. It not only addresses accessibility challenges but also enhances the quality, inclusivity, and relevance of education in the rapidly evolving digital era.*

The National Education Policy (NEP) 2020 plays an important role in leveraging the digital revolution to upgrade education. NEP 2020 aims to transform the traditional education system into a more inclusive and tech-savvy one by emphasizing technology integration, online learning and flexible pedagogy. This transformation facilitates personalized learning experiences, skill development and global connectivity, thereby fostering a dynamic educational environment.

Digital learning has played a transformative role in education by leveraging technology to make learning more accessible, engaging, and aligned with the demands of the digital era. It has opened up new possibilities for both learners and educators, contributing to the overall advancement of the education sector in the country. In view of the present technological era, the National Policy has promoted new technology in the field of education so that education can attain new dimensions
