Abstract: *Child development is a crucial foundation for a nation's social and economic progress. In India, several government schemes promote education and welfare for children, especially those from economically weaker sections. The Balsangopan Scholarship Portal is an online system designed to simplify the application, tracking, and management of child development scholarships. This paper discusses the conceptual framework, modules, and implementation of the Balsangopan Scholarship Portal. The system provides features such as registration, form submission, scholarship objectives, real-time form tracking, and communication channels to enhance transparency and accessibility. By integrating technology into the scholarship process, the portal ensures efficient management, reduces paperwork, and supports the holistic growth of children through timely financial aid..*
