P. R. Pote College of Engineering and Management, Amravati

Abstract: *EduShare is a centralized digital platform designed to support students by providing easy access to academic resources, study materials, and collaborative learning tools. The platform aims to bridge the gap between students and quality educational content by creating a structured, user-friendly environment where notes, question banks, previous year papers, project materials, and reference resources are organized efficiently.*

EduShare focuses especially on engineering and higher education students, enabling peer-to-peer knowledge sharing and academic collaboration. The platform encourages students to upload, access, and exchange verified study materials, thereby promoting collective learning and academic growth.

With a minimal and student-friendly interface, EduShare ensures accessibility, reliability, and structured resource management. The ultimate goal of the platform is to empower students academically, improve exam preparedness, and create a supportive digital learning community..
