Abstract: *The MSBTE ERP College Management System is a comprehensive web-based application designed to automate and streamline the administrative and academic processes of colleges affiliated with the Maharashtra State Board of Technical Education (MSBTE). The system integrates various modules such as student information management, attendance tracking, examination processing, result generation, faculty management, and fee administration into a centralized platform.*

The primary objective of this system is to reduce manual paperwork, minimize errors, and improve efficiency in managing institutional data. It provides role-based access to administrators, faculty members, and students, ensuring secure and organized data handling. Students can access their academic records, attendance, and results, while faculty can manage course materials, attendance, and internal assessments.

The system also facilitates real-time data updates, report generation, and communication between stakeholders. By leveraging modern technologies, the ERP system enhances transparency, accountability, and decision-making within the institution. Overall, the MSBTE ERP College Management System contributes to the digital transformation of educational institutions by offering a reliable, scalable, and user-friendly solution.
