Abstract: *The project titled "AstroStory, AI-Powered Astrology-Based Story Generator" generates personalized stories based on a user's astrological placements. AstroStory is for anyone interested in astrology, self-reflection, and creative storytelling. Users can enter their zodiac placements, such as their Sun sign, Moon sign, or Rising sign (for example, Sun in Leo or Moon in Pisces). After receiving this information, the system analyzes the astrological traits associated with the provided placements and converts them into keywords like courage, curiosity, imagination, empathy, and creativity. The AI language model then uses these traits to create a personalized short story or poem. The generated story reflects the emotional patterns and personality traits linked to the user's astrological profile. The AstroStory system combines astrology knowledge, psychology, and artificial intelligence to deliver engaging storytelling experiences. This application shows that AI can creatively produce relatable and unique narratives for each user.*

Keywords: AI storytelling, astrology interpretation, zodiac analysis, personalized content generation, creative writing
