**Abstract:** *Memory is the ability to remember past experiences, previously learned facts, skills, habits etc. it helps to retrieve the stored information in our brain whenever we need that particular part of information for our current activity. Without memorization the life is impossible and it is a known fact that people with good memory are more successful people. Thus memory plays an important role in day to day life of an individual. As we know that memory is the most important and fundamental aspect of teaching learning process. In the teaching learning process, the learners have to remember the information, knowledge and wisdom gathered by self and others. There is a definite purpose through which all this is stored in the brain. Memory is the process by which information is encoded, stored and retrieved. In today's scenario we see that our whole examination system is based on memorization of facts, skills, experience etc. thus there is a need to find the way/ technique to improve the memory system and help us to learn meaningful language. Memory model can be one of the model by which Short term Memory and Long term Memory can be enhanced. Memorization helps to train the mind to focus and help students and teachers to obtain pre determined goals confirmed by the behavioral action of students.*

**Keywords:** Memory model
