Abstract: *A blog is a website of discussion or information posted on the World Wide Web (WWW) that consists of individual, often informal, diary-style text entries. Messages are usually displayed in reverse chronological order, with the most recent message at the top of the web page first. Until 2009, blogs were usually the work of one person, sometimes a small group, and often covered a single topic or topic. The 2010s saw the emergence of "Multi-Author Blogs" (MABs), written by multiple authors and sometimes professionally edited. MABs in newspapers, other media outlets, universities, think tanks, advocacy groups and similar organizations account for the increasing volume of blog traffic. The growing popularity of Twitter and other microblogging systems has helped incorporate MAB and single-author blogs into the media. Blog can also be used as a verb meaning to add or maintain content to a blog. Many blogs offer commentary on a specific topic or subject, from philosophy, religion, and the arts to science, politics and sports. Others function as more personal online diaries or online advertisements for a particular individual or company's brand. A typical blog combines text, digital images, and links to other blogs, web pages, and other media related to the subject. The ability for readers to leave public comments and interact with other commenters is an important contributor to the popularity of many blogs. However, blog owners or authors often review and filter online comments to remove hate speech or other objectionable content. Most blogs are primarily text-based, but some blogs are about art (art blogs), photography (photo blogs), videos (video blogs), music and audio. In education, blogs can be used as learning resources. They are called Edu-blogs. Microblogging is another type of blogging where you post very short messages. Blog Web Application that has proper design and structure along with easy-to-use User Interface (UI) and a proper commenting system, which will let user to blog about anything they feel their mind to.*

Keywords: Blog, World Wide Web (WWW), Multi-Author Blogs (MABs), User Interface (UI).
