Abstract: *Our Semi-automatic Drainage Cleaning Machine project is primarily focused on the replacement or elimination of manual scavenging. In today's scenario, automation is very vital in all businesses, yet no automation work is available in this field. While cleaning sewage pipes, sadly, human lives are lost and they are exposed to dangerous illnesses. Apart from that, clogged drainage systems might result in flooding and other issues. To address this issue, we are implementing a "Semi-Automated Drainage Cleaning Machine" to address the issues mentioned above.*
