Abstract: *The purpose of chat application is a feature or a program on the Internet to communicate directly among Internet users who are online or who were equally using the internet. Chat applications allow users to communicate even though from a great distance. Therefore, this chat application must be real-time and multi-platform to be used by many users. This chat application in the manufacture begins with the collection of relevant data that will be displayed in the web and mobile versions. The programming language used to build server is HTML, CSS, JavaScript for framework for database PHP with MySQL.*

Keywords: Chat Application, Relational Database Management, Communication, User Friendly, Real-Time Chat App, etc.
