

A Review : A Pharmacological Review on Hibiscus Rosa-sinensis

Akshada D. Dhobale and Nutan S. Wakale
Samarth Institute of Pharmacy, Belhe, Mharashtra, India

Abstract: *The present study of pharmacological review of Hibiscus roseus. Hibiscus is rosasinensis Linn. Having family Malvaceae. The chemical constituents of hibiscus roseus contain tannins, flavonoids, alkaloids, terpenoids, saponins, cardiac glycoside proteins, and free amino acid, carbohydrates reducing sugar, essential oils and steroids. The study on hibiscus roseus that shows the pharmacological activities such as it acts as a anti-inflammatory, anticonvulsant, antipyretic, antiparasitic, dermatological, antimicrobial, antitussive, neuroprotective, antioxidant and antidiabetic. The current review will discuss the chemical constituents, pharmacological activities and importance of hibiscus roseus.*

Keywords: Hibiscus roseus, pharmacological, therapeutic, chemical constituents etc.
