**Abstract:** *Now days a lot of people having eye disease problem and for knowing their disease they do have to wait a lot because of the machine system in the hospital. For resolving that issue, we have developed eye disease detection model using machine learning technology which will help the patient to know their disease as early as they can. The eye disease detection model is trained on huge number parameter so that can predict the eye disease quickly.*

**Keywords:** Eye disease, Keras, Machine learning, Convolution neural network, Supervised Learning
