Abstract: A study to find out the survey of amphibians at Mahad Tehsil of Raigad district from Western Ghats, Maharashtra India were carried out over a period of two years from June 2019 to November 2020 during rainy season. Western Ghats of India is well known for biodiversity hotspot. The selected site was Raigad, Shivtherghal, Birwadi, Mahad and Sav are well-known biodiversity hotspots in Mahad Tehsil, Western Ghats. The ecological parameters viz. rainfall, temperature, humidity etc. are favorable for inhabitations of amphibians. A total of 14 species of amphibians belongs to 6 families and 10 genera in Mahad Tehsil of 342 species of amphibian found in India belongs to 15 families.

Keywords: Amphibian fauna, Western Ghats Mahad, etc.
